

## I found a young raptor, now what?

- Call your local wildlife hospital for advice before taking action.
- If the bird is injured or very young, transport to your local wildlife hospital.

### DO's & DON'TS:

- Wear gloves or use a towel to place baby in a box for transport.
- **Do not** attempt to provide the animal with food or water. This may teach the baby to become dependent on people and prevent rehabilitation.
